13. 2019 RATING AXESOR.

Outlook: Positive

First rating date: 26/05/2014
Review date: 25/04/2019

Business Profile

► **Benchmark player on a national level with a track record advancement in the consolidation of the international business.**

With 58 years of history, Ortiz is positioned as a benchmark company in the national infrastructure market. Since 2010, its internationalisation strategy has focused mainly on Latin America, where it is currently consolidated in Mexico, Colombia, Peru and Panama. International activity consolidated itself in 2018 as the main source of turnover (66%), with significant growth in the 'Energy' segment and the concessions area as key strategic elements in the external development of recent years.

► **Business with positive fundamentals in terms of diversification by business areas and by market, allowing at this time the growth of the turnover and contracting.**

'Multi-segment' operations within the construction activity is widely developed in the Ortiz group, currently allowing the company to reach historical figures in terms of results and the obtaining of a positive recurrence in the winning of contracting. In 2018 the outstanding portfolio (including 12 months of concessions) increased by 18% to 1,224M, maintaining a coverage ratio over revenues above 2x.

Financial Profile

► **Adequate returns on operations, currently encouraged by disinvestment in assets and reduction of the financial indebtedness.**

In 2018, Ortiz continued with the generation of positive results, achieving record turnover (€605M) and continuing the divestment of assets, mitigating the lower profitability. Lower profitability in operations and negative exchange rate differences (accounting effect) made it difficult to obtain higher results at the end of last year. The progress with regard to reducing net financial debt made it possible to meet the targets by obtaining a Net Financial Debt/EBITDA ratio (calculated for a covenant) of 1.6x.

► **Adequate liquidity situation, within a negative trend in the cash flow from operating activities. Disinvestment in assets and the renewed funding reached (Syndicated Loan + Bond) confirm the improvement of the financial flexibility and allow to support the solvency.**

The financial improvement of 2018 is based on the increase in the cash position, an aspect supported mainly by progress made in the divestment of assets. The net cash generated by investments has offset the lower profitability and negative cash generation in working capital. On the other hand, the renewal of its main sources of financing allowed it to sustain the increase in liquidity, making progress in the reduction of the financial debt, although more is still pending in 2019 with the amortisation of part of the bond.

Outlook. The current rating shows a positive Outlook.

Ortiz is currently in a favourable financial situation, after meeting its debt targets and renewing its financial liabilities, while adequately winning new contracts. The consolidation of the positive results and the reduction of debt, under a scenario of higher profitability and cash generation in operations, and the progress made in the winning of new contracts, are elements for a potential increase in the rating. On the other hand, a reduction in profitability and in the capacity to sustain its new contracts are elements for a potential downgrade in the rating.
